

Qualitative Data 101

Lucy Smith (London Plus)

Dr Christine Goodall (HEAR Equality and Human Rights N

Dr Angela Schlenkhoff-Hus (Coalition for Efficiency)

DISCOVER. LEARN. ANALYSE. SHAPE. REPEAT

Objectives of this session

- ✓ Gain a broader understanding of what qualitative data is
- ✓ Distinguish between 'gathered' and 'generated' forms of qualitative data
- ✓ Introduction to a few tools to generate qualitative data
- ✓ Introduction to qualitative data analysis
- ✓ Introduction to research ethics

About Datawise London

[Datawise London](#) is a partnership programme of training, advice and support to help small charities and community organisations in London better use data to meet the needs of Londoners.

- ✓ [Training](#)
- ✓ Resources
- ✓ Get help with your data hunches
- ✓ E-news sign up <https://datawise.london/e-news/>

What is qualitative data?

Data which is:

- ✓ Naturally occurring
- ✓ Open ended
- ✓ Personalistic
- ✓ Narrative

A note on the 'qualitative vs. quantitative' debate

- ✓ It's not 'hard science' versus 'interpretation'
 - ✓ All qualitative data can be coded quantitatively
 - ✓ All quantitative data is based on qualitative judgment
- ✓ The bottom line here is that quantitative and qualitative data are, at some level, virtually inseparable

Types of qualitative data

Interviews: Individual (one-to-one) or group (focus groups)

Direct observation: The observer doesn't query the person/people they observe but simply takes note of their behaviour and statements in a specific situational context

Written documents: The gathering and analysis of existing documents, e.g. newspapers, magazines, books, websites, memos, transcripts of conversations, annual reports

Gathered versus generated qualitative data

Gathered:

"Dismal"
○○○○○ Reviewed 14 May 2010

A barman appeared and we asked if we could get a drink. A stunned look crossed his face, as though this was a ludicrous question that hadn't been covered in Bar Keeping 101. He consulted another member of staff then turned to us. 'No', was his reply, 'the bar doesn't open until 6pm'. 'But!' we countered, 'your sign downstairs says you serve food assimilated this complex data, solved a particularly tricky question that must be an old sign!'

Generated:

What is 'gathered' (found) data?

- ✓ Datasets collected by others and made available publicly or by permission
- ✓ Tend to be datasets gathered in traditional ways (e.g. surveys, interviews)
- ✓ Social media

Generating data: qualitative research methods

Interviewing

- ✓ Unstructured interviewing
- ✓ Semi-structured interviewing
- ✓ Structured interviewing
- ✓ Focus groups

Interviewing

Unstructured interviewing

Based on a clear plan that you keep constantly in mind, but also characterised by a minimum of

control over people's responses
Used in situations where you have lots of time or can interview people on multiple occasions

Often forms the basis for semi-structured interviews

Best uses of unstructured interviewing

- ✓ for finding out about the lived experience of others
- ✓ for building rapport with people before moving to more formal interviews
- ✓ to see whether somebody would make a suitable interviewee for a more structured interview
- ✓ when you interview somebody who is well-known to you and a more structured interview would feel unnatural

Semi-structured interviewing

... is a scheduled activity

Best used in situations where you won't get more than one chance to interview someone

Uses an **interview guide**

Interviewer is prepared and in control of what they want from the interview, but they are not trying to exercise excessive control

Structured interviewing

Quantitative research method
commonly used in survey research

Aim: to ensure that each interview is
presented with exactly the same
questions in the same order

This ensures that answers can be
reliably aggregated and that
comparisons can be made with
confidence between sample
subgroups or between different survey
periods.

Focus groups

Recruited to discuss a particular topic

Typically have 6-12 members, plus a facilitator (7-8 is a popular size)

Participants should be more or less homogeneous and, in general, should not know one another

Facilitator should be unknown to the participants and participants should not be the employees of a facilitator (hierarchy is not conducive to

Broad questions to elicit responses and generate openness) discussion among the participants

Best Practice

BEST
PRACTICE

- ✓ Prepare an interview guide and test your questions
- ✓ Consider practicalities, e.g. location, timing, costs for interviewee to attend
- ✓ Consider cultural and power dimensions of the interview situation
- ✓ Assure interviewees of anonymity and confidentiality: consent forms
- ✓ Record interviews and analyse early

Qualitative Data Analysis

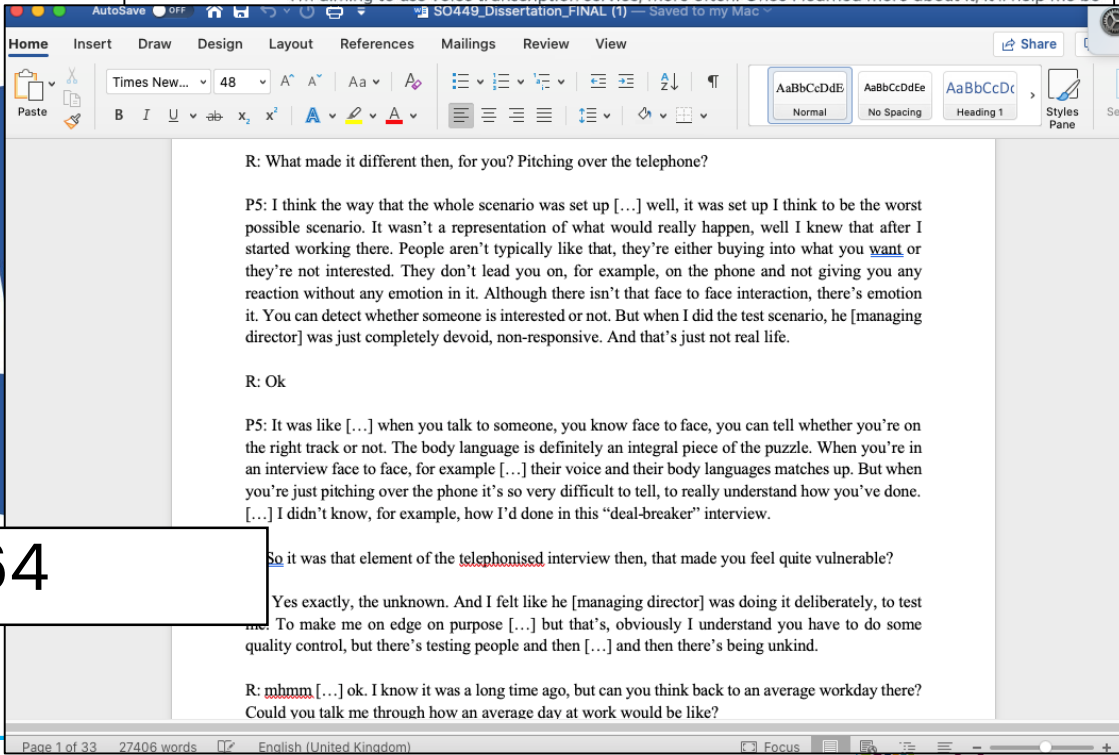

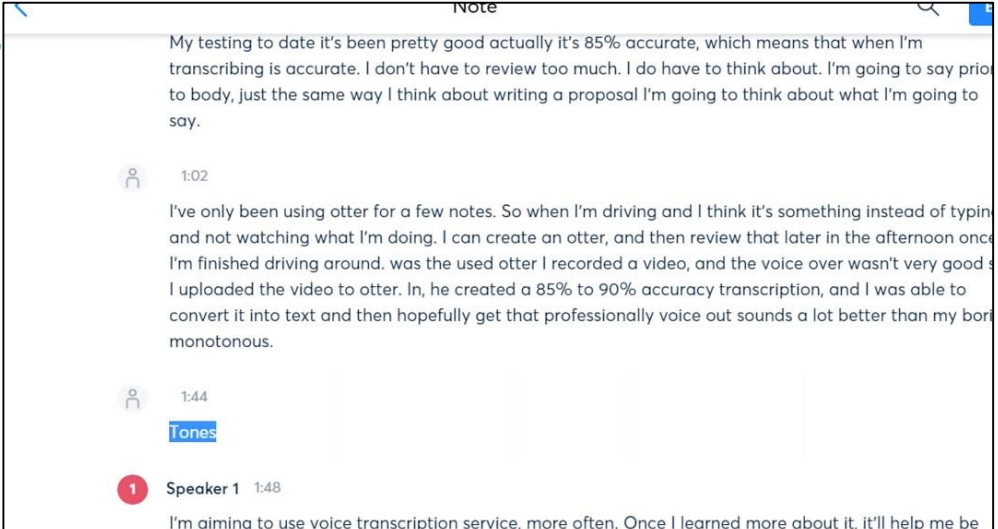

AN INTRODUCTION BY LUCY SMITH (LONDON PLUS)

Turning "talk" into data.

Let's Otter!

"Dismal"
Reviewed 14 May 2010
A barman appeared and we asked if we could get a drink.
A stunned look crossed his face, as though this was a ludicrous question that hadn't been covered in Bar Keeping 101. He consulted another member of staff then turned to us. "No", was the bar doesn't open until 6pm". "But", we countered, "your sign downstairs says you serve food from 5.30". His eyes glazed over as he assimilated this complex data, then with the look of a man who

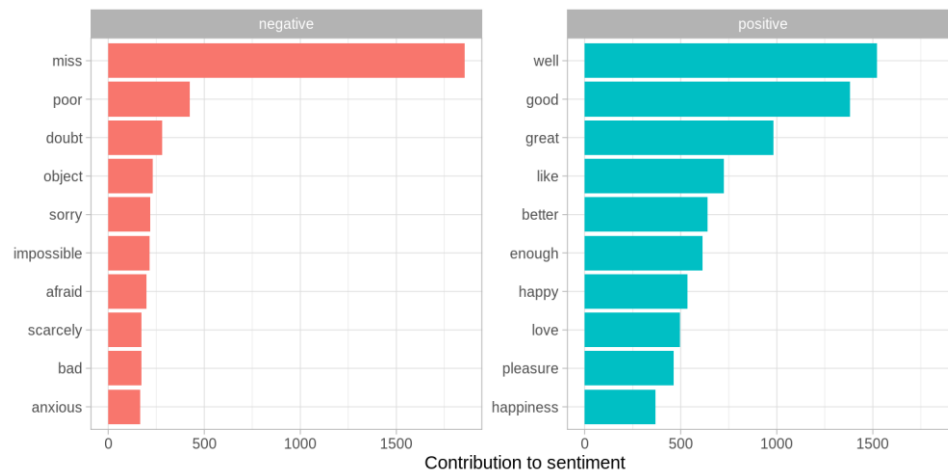

1hr 45 of talk = 15,964

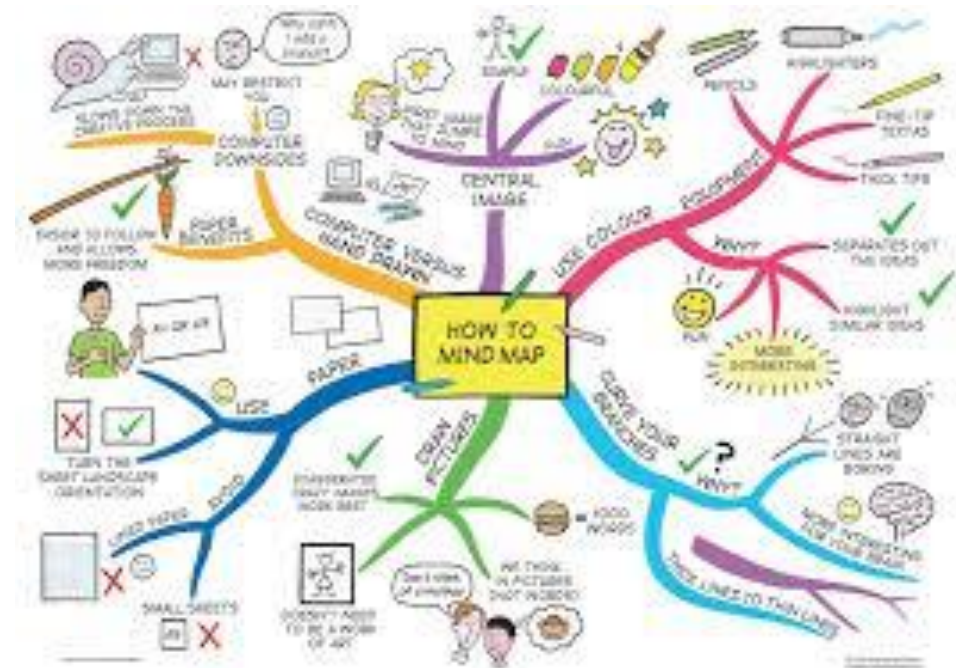

words **DRAGON**
NATURALLY SPEAKING

QDA can be best described as having two main approaches

The hard approach

The soft approach

The hard approach

- Text (“soft data”) goes in, patterns and numbers (“hard data”) come out.
- In most cases there is little or no reading of the text required at all! i.e AI used by Google and Facebook.
- Most effective when applied to a large dataset i.e a corpus of text.

The tools...

- Statistical and/or linguistic techniques are used to **map out sets of patterns** within the text, such as...
 - **counting frequencies** (how many times a word occurred)
 - **identifying strings** (words or phrases commonly used together)
- Through identifying these patterns, the analyst can then go on to **identify the sentiments** of the author(s)
 - **subject matter** (i.e reoccurring words -> themes)
 - **attitudes** (i.e positive/negative)

This is known as content analysis or text mining*

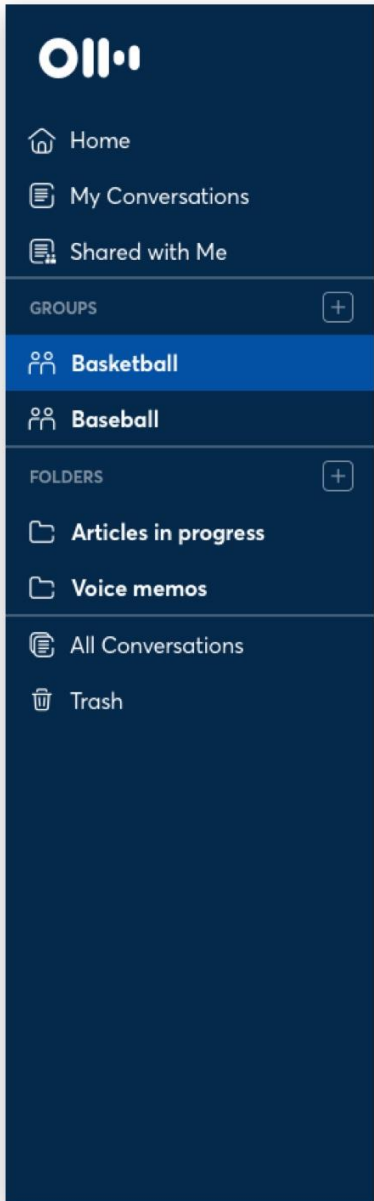

The mole...

Different paths through the data lead to different outcomes
(evidence)

A few “quick fixes”...

but beware of breaking the robot...

The "soft" approach

- Known as "deep reading" of the data
- Requires both attention to detail and reading beyond the text
- Things you might look for include: emotive language, silences/one word answers, pauses, pitch, tone, use of sarcasm, expletives etc
- **The weaving analogy:** these pieces of data are threads that you carefully stitch together to craft a tapestry (the overall narrative or story)

The tools...

- Examination of meaning(s) through the application of interpretative labels, otherwise known as "codes"
- By identifying and accumulating "codes", the analyst can then go on to identify *emergent* themes within the data

**This is known as the GROUNDED
METHOD (Glaser & Strauss 1967)**

Research Question: Why do People turn Vegan?

Interview transcripts → Quotes/Paragraphs → First-order codes → Second-order

Boring and Crowded

I rarely write negative reviews, but this one deserves it. Plain and simple **it's boring**. It is extremely **crowded**, especially with small children who can't appreciate the experience. **Long lines everywhere.**

I thought maybe the **audio** would provide interesting tidbits or at least deliver information in an interesting fashion, but it was **dull** and **no more informative** than the signs along the way.

After **wasting 3 hours** there, I still couldn't tell you where Anne Boleyn was kept nor really much beyond what I could've learned from a river cruise. We did not **opt for a guided tour** because there appeared to be **200+ people in each group**. Even my cheerful husband was crabby at the end of the tour. Avoid it.

First order codes

- Boring
- Crowded
- Audio guide
- Dull
- Not informative
- Guided tour
- 200+ people in a group
- Long lines everywhere (Queuing)
- Wasted 3 hours

Second order codes

Uninformative Audio Guides

Over Subscribed tours

Time consuming visit

Themes (code groups)

Information Resources

Capacity

Time/Duration of Visit

Why code?

- ✓ Enables you to draw out themes in a systematic way
- ✓ By attaching “codes” to extracts of text, you can put together threads (data) to tell a story

HOWEVER...

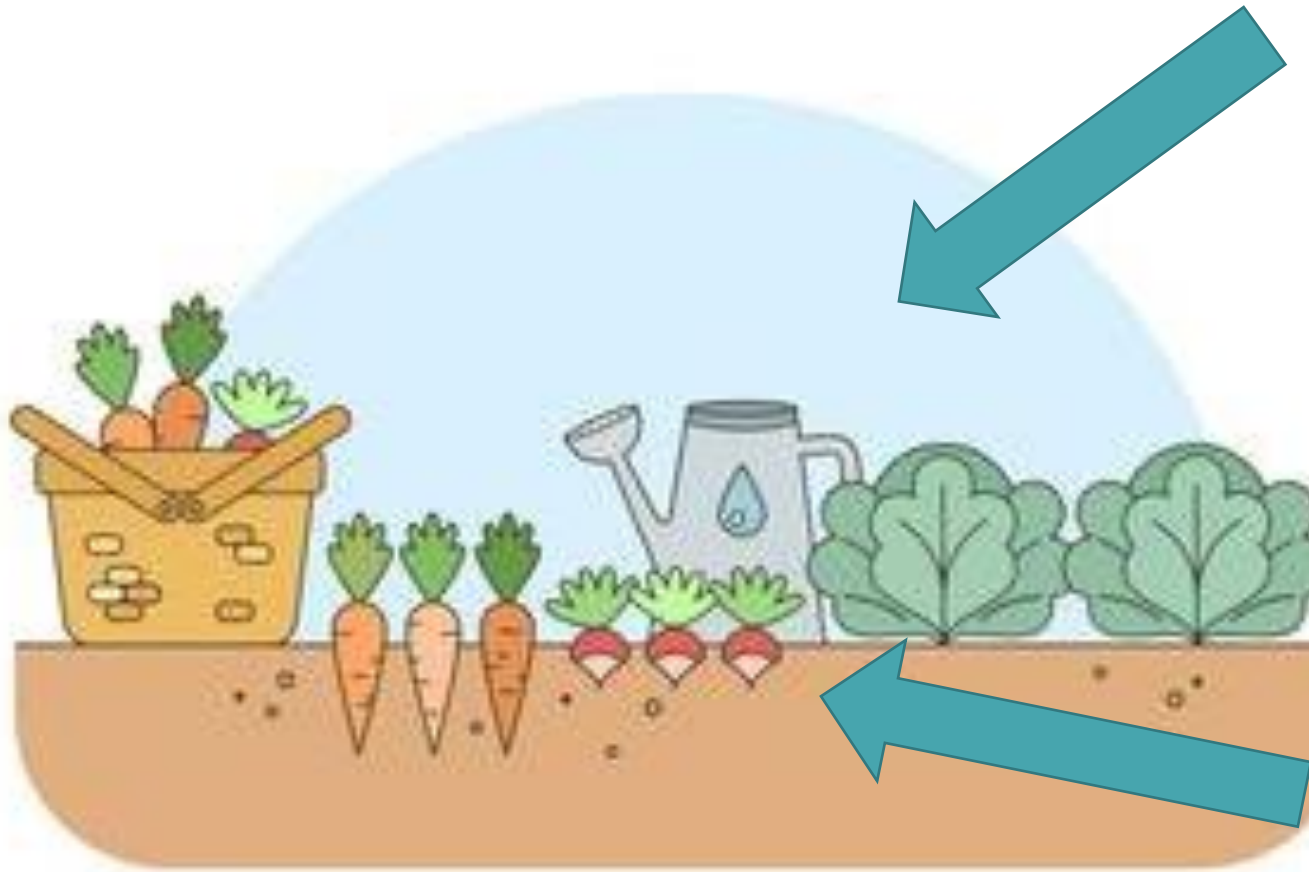

This could take you a very long time! 😞

45,665 reviews... and counting!

The vegetable patch analogy

(using both approaches for the best results!)

Content Analysis

- ✓ Useful for taking stock of what is on the surface (**breadth**)
- ✓ provides us with **a breakdown of what is there** (i.e how many seeds have been sown, quality of the soil -> **patterns**)
- ✓ ...and **what this literally means** (i.e you have planted carrots and cabbages -> **"sentiments"**)

The Grounded Method

- ✓ Useful for extracting the narrative(s) or story -> **what is concealed underneath the "hard" surface (depth)**
- ✓ **Allows for a deeper understanding of emergent themes, including hidden nuances** (i.e different flavor profiles between the same species of veggies)
- ✓ **Enables us to be open to surprises (unexpected themes/findings)** (i.e you might end up with more crops than you bargained for!)

In this blog, London Plus...
It's life, Jim, b...
We have suddenly found ourselves living in extraordinary times. From nurses crying in their cars to celebrities crooning John Lennon's "Imagine" from the comfort of their luxury estates, social media is ablaze with talk of the crisis and calamities caused by #COVID19. To ensure that the causes of non-profits are not overshadowed, we at London Plus felt a need to cut through the noise and draw upon our **data**base to showcase exactly what's happening in London as civil society muddles through the crisis.

If there is one thing I *have* noticed in these turbulent times, however, it's that we're all suddenly looking at **a lot** of statistical **data**. Over the past week, everywhere I look seems to be pie charts, bar charts, line graphs (and, surprisingly, even the odd social network analysis piece) amidst "the storm of stats" flooding our inboxes, news bulletins and of course, social media. And whilst this is all very informative (and, most critically, very important), we're forgetting one of the most obvious sources of knowledge- voices. What people say, and how they say it, can tell us just as much (and

3	1	<p>A Zoo - Not a Museum</p> <p>As you approach the zoo-museum there are hundreds - maybe a thousand - people being herded through cattle chutes waiting to be examined before entrance (waiting out in the rain). Once inside, you look around. There were probably six thousand people in this place today - sitting on the floor, in the restaurant, blocking every ingress and egress, not really looking at anything but each other. They are fish out of water: "Now, why was I loaded up on a bus with a hundred other people and drug over here?" Answer: "Because it's the British Museum."</p> <p>And - interestingly - do you know how many toilets there are for those 6,000 people? Six male and six female. After you descend into the crypt under the once famous - now incarcerated - Reading Room (encased in a Carrera marble mausoleum for posterity), the line of women goes out the door. On the men's side, you might only have to wait twenty minutes, but at least you get to wait inside the restroom. The one handicapped toilet located in an obscure alcove up on ramp is out-of-order.</p> <p>Funny thing if you looked around. With all that security outside, nobody is working inside. Not a guard, an attendant, nobody. (Keep down.) Just the zoo-scape of visitors. At the one information desk, there are two people. Their job is to sell the audio-tour devices. When I asked one of them a question (other than "Where's the restroom,") he told me, not being able to answer the question: "They don't tell us much."</p> <p>The British Museum is a significant part of Britain's patrimony, a national treasure, or it used to be. Now it has devolved into feeding time at the prime</p>

Analysing Trip Advisor (Takeaway Exercise)

Torture (1 star)

London is too hot. The British Museum is too crowded. I have been to British Museum many times before. For the very first time, I found it so hot, noisy and full of bad smell. Everywhere is visitors. It looks like a market. I would say it is torture.

Of all the Museums of the world with 'British' in the title, this has got to be my favourite. Well, perhaps joint favourite with the British Concrete Museum and; The British Museum of Roundabouts BUT! let not that take anything away from this bastion of world knowledge. Particularly impressed with the Sutton Hoo treasures; the bog man; mummies (lots of in various states); Roman finds; Greek pots; the Rosetta Stone and; the Elgin Marbles (I will leave others to argue over where they belong, but possibly worth seeing them sooner, rather than in Athens...)

Drinks and food are a bit pricey! Take your own is the best suggestion. Perhaps the best gift shop outside of a Disney resort. Truly an excellent and informative museum with a great range of exhibits. Certainly should be no. 1 on a list of visits whilst you're in

Didn't care for it (2 stars)

I had heard what a great museum this was so I was excited to go. I have to say its one of the most poorly displayed, unimaginative museums I've ever seen. Its like someone got a discount on buying glass display cases and shoved everything into it. Very boring displays. We saw all we wanted to within an hour and left. Many other museums in London to see that are much more interesting.
